Sterile Processing Technician Training

Join a healthcare company of your choice as a qualified professional. You can get your training from one of the state's most highly-recognized sterile processing technician, nursing assistant and caregiver training schools - California Pacific International College. We turn students into professionals in their noble calling as care providers to patients in clinics, healthcare centers, hospitals, care homes, medical facilities and even private homes.

California Pacific International College

To help aspiring nursing assistants, caregivers, home health aides and healthcare technicians to receive their training with the aim to expressly practice it in the community. We hope to produce more healthcare professionals to answer the growing need of our community for quality healthcare services.

Certification

The school will help students coordinate with the certification agency like CBSPD in order to obtain endorsement to professionally practice as sterile processing technician, medical and nursing assistants, healthcare technicians, home health aides or care providers in general.

Our role as Care Providers and Trainers

We understand that healthcare is an industry that thrives on reliable services. It is necessary that we produce competent professionals because the environment in healthcare is such a competitive one. The formula for success that we capably put to action everyday is the precision of service delivery and compassion for patients. We expressly encourage our students to emulate our example.

Courses

Training at California Pacific International College prepares future professionals for their responsibilities and duties when they are hired by a healthcare company locally or in a different state. We hope that as they age in this profession and become veterans of their crafts, they will carry with them the stamp of ethics and service excellence that has made graduates from California Pacific International College unique in the crowd of healthcare practitioners.

Here are the courses offered by our College:

- Sterile Processing Technician
- Endoscopy Training Program (GI)

Admissions

Students for any of the following courses will undergo a review by the admissions staff:

- Sterile Processing Technician
- Assistant Surgical Tech
- Home Health Aide
- Medical Assistant
- Certified Nursing Assistant

The purpose of the evaluation is to check on your backgrounds, educational attainment and eligibility for the course that you hope to enroll in.

Sterile Processing Technician

Course Name: Sterile Processing Technician

Other Similar Job Titles --- Surgical Instrument Processor or Central Processing Technician

This course runs for 120 hours, 80 of which will be spent in a classroom setting for theory education while the rest of the 40 hours will be practical application or workshop training.

The training includes, but is not limited to, the following:

- Responsibilities of the Position as Sterile Processing Technician
- Hospital Policies, Procedures, Organizational Structure and Rules
- Federal and State Regulations
- Job Safety Hazards and Measures to Reduce Risks
- Infection Control
- Decontamination
- Proper Equipment Use
- General Medical Terminology
- Sterilization Process

Endoscopy Training Program (GI)

California Pacific International College offers the Endoscopy Training program. It is focused on providing practical and theory-based classes for aspiring Interventional Endoscopists, Surgeons, and Hepatogastroenterologist.

There are several objectives to the course. One of the objectives is to instill the necessary knowledge to students in the area of gastrointestinal interventional endoscopy. The training will also involve proficiency in the technical steps to be used in basic and advanced endoscopic procedures.

After skills training, we then focus on interpretation of results, from identifying problems, potential complications and how to prevent such complications from occurring.

In the program, students will be exposed to practical application of the skills they learned. Clinical instructors will guide students as they practice on live tissue too. The course includes clinical application, video sessions and theoretical classes with the participants.
